

Cu-connections

Elpress Cu-connections are produced from electrolytic 99.9% copper. Terminals and through connectors exist in a large variety of types for stranded as well as for flexible conductors. C-sleeves for earth conductor branch off also come in a large number of sizes. If a standard type is not suitable, we produce tailor made designs specific to the application.

KR/KRF terminals and KS/KSF connectors may be used for both stranded and flexible conductors.

KRD terminals and KSD connectors are used for stranded conductors.

KRT terminals and KST connectors equal the German "Standard types" (not DIN!) and are used for stranded conductors.

C-sleeves are used for branch-off or cross connections for mainly earth conductors such as for lightning protection and earthing grids.

By crimping Elpress terminals and connectors with Elpress crimp tools, connections are achieved that meet the requirements of SEN 245010, BS 4579:1, VDE 0220:1, EN-IEC 61238:1 whichever is applicable.

Number of crimps

Normally only one crimp per conductor end is needed up to and including 150 mm² and two crimps for larger areas. For detailed information see crimp die tables in Chapter 10. If possible multiple crimps should be positioned with a few mm distance from each other and from the neck end. In many cases however, overlapping crimps have to be made for space reasons.

Crimp sequence with two adjacent crimps.

Markings on Cu-connections

Elpress marking system for Cu-connectors shows logotype, conductor area and id-number for crimp die to be used. This system enables final inspection of proper die use as the die number is automatically imprinted by the die on the crimped barrel.

Marking of tube terminals	
32 (on the terminal neck)	
ID-no. for the hexagonal die	
(Elpress logo) 300-16F (on the palm)	
300 = Cu-conductor area, mm ²	
16 = hole for screw M16	
F = KRF	

Marking of connectors	
(Elpress logo) 27	
ID-no. for hexagonal die	
185 F (possible screen area and an earth-sign)	
185 = Cu-conductor area, mm ²	
F = KSF	

Marking of tap-off C-sleeves	
120 - 150/70 - 95	
120 - 150 = Cu-wire range, mm ²	
70 - 95 = Cu-wire range, mm ²	
(Elpress logotype) C16 - 13 Cat.no.

EasyGuide

-to easily introduce flexible conductors into the terminal

EasyGuide consists of a stand (EG-TS) and tapered inserts (EG-xx) which are chosen to fit the terminal size. Place the terminal in the guiding groove on one side of the insert and introduce the conductor from the other side, open the insert halves and remove the terminal with the conductor in place.

Finally a simple way to get all the strands into the barrel! Suits Elpress type - KRF terminals and connectors from 6 to 240 mm².

Inserts	
6 mm ²	EG 6
10 mm ²	EG 10

Two crimps are made when using the V500-, V611-, PV611- or T2600-systems, die TB7-20.

Connectors for Ericsson Cables Excel type 10 - 16 mm²

■ Data: electrolytic copper, tin plated, for PEX-insulated cables 100 mm² Cu solid (Excel), to be applied non-tensioned.

Cat. no. mm ²	mm d	D	L	Pcs/ pack	Marking*	Crimp tool page
KSX 10	4,5	7,0	65	24	10X 7	9:6

* Elpress logotype included.

Two plus two crimps are made when using the V500-, V611-, PV611-, or T2600-Systems, die TB7-20.

Branch connectors (C-sleeves) 6 - 300 mm²

- Data: electrolytic copper, for connecting and branching of earth conductors, in some cases two adjacent compressions are necessary, see tools chapter 9.

Elpress logotype is included in the marking. On the "reverse side" the C-sleeve is marked with the applicable wire area ranges.

Cat. no.	Wire section area ranges		mm a	b	c	Pcs/pack	Die id-no.
