THE WORLD OF

Simplo2000 Multiprint is a software application designed by Grafoplast for marking cores, cables, components and equipment. It is exceptionally user friendly, information is displayed on screen through a simple and perceptive interface. With just a few basic steps a series ofidents are created on screen (alphabetical numerical or even imported logos) these can easily be modified at any time prior to generation. Once the information has been confirmed very quick, high quality results are obtained. With Simplo2000 several operations can be carried out simultaneously on different external devices (all plotters, laser printers, SI2K), offering the ultimate in flexibility and vast timesaving.

Let's take a look at some of the programme features:

- Compatibility with all Windows operating systems (95, 98 Nt (service pack 6) 2000.XP)
- Available in 5 languages with handbooks and help on line
- Compatibility with all screen resolutions : 640x480, 800x600, 1024x768
- Management of all Windows True Type fonts. In particular, for the plotter the Grafoplast font used is designed to have just one pass of the pen
- Complete library of the symbols used in the electro-technical sector
- Complete management of characters: vertical and horizontal dimensions, horizontal spacing, line pitch, 0 to 360 degrees rotation
- Definition of all text attributes (vertical and horizontal alignment, vertical writing, compacting into the writing space, colour management) and capacity to write on several lines.
- Management of character properties: bold, italics, bold and italics
- Clipping management on the screen and in printing. When a text exceeds the size of the label a warning is displayed on the screen in red.
- Compatibility of the most common image formats (gif, jpg, jpeg, bmp,wmf) with horizontal and vertical arrangement functions
- Integrated Graphic Editor for plate customising with the possibility to insert several images in the same item, using different fonts, inserting the fixed parts and the variable parts of the text.
- Complete printing functions, possibility to define repetitions, grouping, change the print starting position and also to address the printing onto an item that is not the one you are working with on the screen. You can print a file generated for the plotter on an A4 (297x210 mm) sheet to check if data is correct .
- Optimising space on hard disk to save prepared files
- Copy and paste utility between the different Windows applications
- Compatibility with the most widely used CAD programmes

Other services offered by Grafoplast:

- Free downloading from the www.grafoplast.it site to update new items and the support utilities that are created by continual market demands-
- Grafoplast phone (+39-0131-718477) for assistance and technical information

System minimum requirements:

Pentium II 133 Mhz
16 Mb RAM for Windows 95, recommended at least 32/64 Mb, 64Mb for Windows Nt 2000.
XP
Free space on hard disk 10/15 Mb
Free serial port: (RS232) or parallel

SI2KPRINTUNO

Grafoplast have spent many years developing alternative printing methods to the pen, paying special attention to customer requirements, innovation, simplicity and cost efficiency. The Grafoplast SI2KPRINT1 thermal transfer printer is the answer to an ever-demanding identification market. Born out of Grafoplast's 40 years experience in applying advanced technologies, the new SI2KPRINT1 thermal transfer printer is the best solution to any marking problem. The GRAFOPLAST SI2KPRINT1 provides you with many features, including fail proof loading and usage, low maintenance, high quality results, and cost efficiency.

SI2KPRINT1 will exceed your requirements, no matter how demanding. Thermal

printing technology and the use of special ribbons, allows you total flexibility, you can print tags, plates or adhesive labels tailored to your needs using a wide range of materials, including: PVC, Polyester, ABS, and Polycarbonate. This new printer is very easy to use, all you have to do is open the cover, load the ribbon cassette and the cleaning cassette, and SI2KPRINT1 is ready for printing.

SI2KPRINT1 is the ultimate Grafoplast printer, which completes our range of computerised systems. The software Simplo 2000

allows you to use all three printing systems (thermal printer, plotter and laser printer) simultaneously, with no need to convert your file.

The ident you wish to print on is automatically fed into the printer, while the cleaning cassette keeps it perfectly clean assuring the best printing quality. Last but not least, Simplo2000 gives you the freedom to prepare data quickly and easily.

The compact design engineered for high quality resolution, silent and fast printing. That's what you get when you use SI2KPRINT1.

RANGE:

* **TAGS FOR TRASP SYSTEM**

Each module comprises of 40 tags.

The printing of one module takes approx.15 seconds.

* **SELF-ADHESIVE STRIPS**

Are suitable for the identification of internal and external components associated with panels and boards. These are available in three heights: 10, 15 and 20mm and two lengths: 215 and 430mm.

The Printing of 4 strips 10 x 430mm takes approx. 60 seconds.

• **EXTERNAL LABELS FOR PANELS AND BOARDS**

The plates consist of 3 or 4 labels.

The printing of one plate takes approx. 45 seconds.

• **TAGS FOR TAG HOLDERS, CHANNELS AND CABLES**

The plates consist of 8 or 16 tags.

The printing of one plate takes approx. 45 seconds.

• **TAGS FOR TERMINAL BLOCKS**

Coming soon!

Once the printing process is terminated, the items are ready for use, as the ink dries instantly. The SI2K printer requires low maintenance, the print head and cleaning roller can be easily cleaned using a damp cloth. Replacing the ribbon cartridge is a clean, simple and single operation without the worry of splashing, spilling, spotting or staining.

SI2KPRINT1 is compact enough to enable easy movement between different sites, also thanks to the impact resistant case.

Any time, any location SI2KPRINT1 works wherever, whenever, whatever!

TECHNICAL DATA

- **Technology:** thermal transfer: Heat is used to transfer data onto a variety of tags.
- **Consumable material:** Ribbon, available in Black, Silver or Gold, and cleaning cassette.
- **Maintenance:** Simply clean the roller and the head with a damp cloth.
- **Resolution:** 300 dpi (300 dots per inch). High resolution to obtain clear legible texts.
- **Max printing area:** width 54 mm x length 496 mm
- **Max dimensions of item:** width 80 mm x length 500 mm
- **Item thickness:** from 0.1 mm to 6 mm
- **Printing materials:** PVC, Polyester, ABS, polycarbonate, etc.
- **Drivers available:** For all Windows operating systems (95,98, NT - Service pack 6 - 2000.XP)
- **Fonts available:** All Windows fonts.
- **Compatibility of formats:** most widely used formats (gif, jpg, jpeg, bmp, wmf)
- **Print colours:** Black, Silver, Gold
- **Printing rate:** 30 mm/second
- **Dimensions:** 418 x 235 x 210 mm
- **Weight:** 9.5 kg
- **Display:** LCD. Displays information on the printing status, ident size, colour of ribbon and any warning message, on 2 rows.
- **Built-in keyboard:** to set different adjustments, run a print test, stop the printing in process, slide the item forward or backward, check the printer sensors.
- **Head life:** 15 km of printed text, equivalent to approximately 6,000,000 tags type SI2K0.../10-12-15-18
- **Warranty:** 1 year for manufacturing faults and flaws. The printing head is not covered by the warranty since it's considered a consumable item.

PRINT SYSTEM

COMPARISON BETWEEN PLOTTER

System	Plotter
Item	Tessera per filo (4 x 15 mm)
1 Plate holds	1200 Tags equivalent to 2,5 plates
Production time*	without Handling 47 min x 2.5 = 117.5 minuti
Handling	positioning of the tags on the plate and removal of the tags after plotting pen testing approx. 5 min x 3 = 15 minutes
Total time	approx. 132.5 min
Job	complete plate 480 tags for wire text from ABC-0001 to ABC-1200

* For production time we mean from the OK of the print till the last tag printed.
(with the tags already positioned on the plate)

ARISON and SI2KPRINT1

AUTOMATIC WORKING (STACK)

TAGS FOR SLEEVES; 1 PACK HAS 1200 TAGS

1st STEP

Loading modules

The modules are put in the feeder; every feeder can contain 30 modules each time, for a total of 1200 wire tags

2nd STEP

The print

1200 wire tags are printed in 12 minutes. That means that we have printed a complete pack. No drying process of the ink is required

3rd STEP

Prefracture of the module

The printed module can be separated using the S12K009 Item

4th STEP

Subdivision into backbones

5th STEP

Insertion of the sleeve

The tag is inserted into the sleeve

6th STEP

Wiring

The marking of the wire is perfect, protected and unalterable in the time

SEMIAUTOMATIC WORKING(SINGLE FEEDER) TAG FOR TERMINAL BLOCKS

1st STEP

How to position the item

The terminal block modules must be positioned on the SI2K0017 plate

2nd STEP

How to position the plate

The plate is positioned on the SI2KPRINT1 printer

3rd STEP

Printing a terminal block module

It's possible to print 45 terminal block tags in 15 seconds
It's possible to print a single tag and use the remaining module afterwards

4th STEP

How to divide the module into backbones

The terminal blocks module, composed by 5 backbones, can now be divided and it's ready to be used.

5th STEP

Mounting

The mounting of the tags on the terminal block (in this case on WDU 2,5 mm) is very quick and precise.

MANUAL WORKING (PLATE)

TAGS AND STRIPS

1st STEP

Loading modules

2nd STEP

The print

3rd STEP

It's possible to print 63 tags in 15 seconds using all Windows' fonts, or you can print them separately using the remaining module.

4th STEP

The tags can be easily divided into strips

5th STEP

The separation of the single tag is easy, quick and precise, you haven't parts of material on the borders

6th STEP

APPLICATION

With the option PLATE you can mark in a quick a precise way:

THE EQUIPMENTS
THE COMPONENTS
THE CONTACTORS
THE DISTRIBUTION
AND AUTOMATION
PANELS

The thermal transfer printer (item SI2KPRINT1) is used as an electronic printing support since it has all the appropriate characteristics to ensure perfect marking of Grafoplast components, including tags, labels, strips and FIRMA series panel identification plates.

It is a new generation printer that uses the thermal transfer principle for marking (the writing is generated by the heating of a printing head/resistor). Usually used to print labels for bar codes and automobile plates, it has been appropriately modified to print Grafoplast components ensuring high reliability. The SI2KPRINT1 printer is equipped with a power supply connection and parallel cable
